ABSTRACT

An attempt has been made to construct and validate the mental health and classroom climate scales among the special school students. Well structured scales were administered among them. The sample consists of 750 special school students randomly selected from the schools situated in Tamilnadu state. The scales were validated using 't' test and 'F' test. The present research discusses about the level of mental health and classroom climate among the special school students.

KEYWORDS: mental health, classroom climate, special school student.
