ABSTRACT

In this paper, by the help of the international product cycle and gather together of the general equilibrium of the dynamic model observed that the intellectual property rights protection effects more on the strengthening of the developing countries depending on the production transfer from developed countries to developing or undeveloped countries. In this research you are able to find that intellectual property rights protection reduces the rate of product innovation and transfer of that in the developing countries. However, it depends on the wage of the developing countries as well if the foreign products come into the picture. On the other hand, it has another influence on the production channel if the transfer through imitation. Intellectual property rights protection might be broadly interpreted the same as other incentive collecting from developing countries and given to the developed countries. by this research has just focused on the effects of intellectual property rights in the developing countries.

KEYWORDS: intellectual property rights, protection of the property, developing countries, developed countries, international contract
